Sauté

Bake

Grill

- Microwave speed & oven cooked taste
- Keeps natural moistures in food
- Cooks frozen food without being thawed
- No smell of frying food
- Fries and boils eggs without bursting
- Easy to clean & use nonstick coating

www.microhearth.com

How it works

A. Ceramic coated painted high dome steel lid with a standing handle
Specially constructed lid eliminates microwave from penetrating through food which causes unwanted dryness during cooking. The high domed shape gives you ample cooking space inside. The unique handle conveniently allows the lid to stand.

B. Silicone steam pan
Removable steam pan separates food from steam water underneath when placed in the vessel and its perforated surface drains excessive water while steaming food.

C. Nonstick coating cooking vessel
Inside coating is specially formulated to perform on the hottest heat during cooking and is scratch resistance. This makes it easy to use and clean.

D. SPS plastic body with stay-cool built-in handle
Its stylish body is made of plastic that is even suitable for some of medical device applications. It is high-heat resistant with low heat-conductivity so that body stays cool after cooking. Also, its rigidity and good dimensional stability prevents from misshaping after repeated uses.
